

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (original): A method of manufacturing a curved flat panel display device, comprising the step of adhering, at least a first film to the surface of a second film, in such a way that the films are held in a curved shape by means of the adhesion between the films.

Claim 2 (currently amended): ~~A-The method as in~~ of claim 1, wherein one of said films is a display layer exhibiting display functionality, and the other one of said layerfilms is an additional film.

Claim 3 (currently amended): ~~A-The method as in~~ of claim 2, further comprising the step of pre-tensioning said additional film before it is adhered to the surface of said display layer.

Claim 4 (currently amended) : A-The method as inof
claim 3, wherein the step of pre-tensioning said
additional film comprises the step of uni-axially
stretching said additional film, during the adhering
process.

Claim 5 (currently amended) : A-The method as inof
claim 2, wherein the step of adhering the films to each
other comprises the step of applying a bending force to
one of said films, in which position the other film is
bent and adhered to a surface of the bent film.

Claim 6 (currently amended) : A-The method as inof
claim 2, wherein said additional film is arranged to be
adhered to one of an intended inner or outer side of the
curvature of the flat panel display.

Claim 7 (currently amended) : A-The method as inof
claim 2, wherein said adhering of the additional film to
the display film is done by means of laminating.

Appl. No. 10/535,753

Resp. dated Apr. 20, 2007

Reply to Office action mailed Mar. 21, 2007

Claim 8 (withdrawn) : A curved flat panel display device, comprising at least a first and a second film, characterised in that the first and second films are adhered to each other, whereby the adhesion between said films is arranged to hold the display device in a curved shape.

Claim 9 (withdrawn) : A display device as in claim 8, wherein the first and second film is an additional film and a display layer, respectively.

Claim 10 (previously presented) : A curved display device, being manufactured in accordance with claim 1.

Claim 11 (withdrawn) : A display device as in claim 9, wherein said additional film is arranged to cover essentially the entire surface of the display layer.

Claim 12 (withdrawn) : A display device as in claim 9, wherein said additional film is arranged to only partly cover parts of the surface of the display layer.

Claim 13 (withdrawn) : A display device as in claim 9,
wherein said additional film is arranged essentially
along an edge of the display layer surface.

Claim 14 (withdrawn) : A display device as in claim 9,
wherein the additional film has a varying thickness.

Claim 15 (withdrawn) : A display device as in claim 9,
wherein the thickness of said additional film is selected
to shift a plane of essentially zero tensile or
compressive stress of the display device upon bending of
the display device to a desired plane of the display
device cross section.

Claim 16 (withdrawn) : A display device as in claim 9,
wherein said display device is one of an liquid crystal
display device, an electrophoretic display device, an e-
ink device, a polymer light emitting display device or an
organic light emitting display device.

Claim 17 (withdrawn) : A display device as in claim 9,
wherein said additional film further is arranged to

function as at least one of polariser, a front light, a backlight, a brightness enhancing film, a reflector film, an anti-reflection film or a retardation film.

Claim 18 (new) : A method of manufacturing a curved flat panel display device, comprising the steps of:

providing a first film,
applying a force to the first film to achieve a curvature, and
adhering a second film to the surface of the first film, the second film and the adhesion between the first and second films restraining all or part of said force, whereby a desired curvature of the curved flat panel display device is maintained.

Claim 19 (new) : The method of claim 18, wherein one of the first and second films is a display layer exhibiting display functionality, and the other one of the first and second films is an additional film.

Claim 20 (new) : The method of claim 19, wherein the first film is the additional film and the step of

applying a force comprises pre-tensioning the additional film before the additional film is adhered to the surface of the display layer.

Claim 21 (new) : The method of claim 20, wherein the step of pre-tensioning the additional film comprises the step of uni-axially stretching the additional film, during the adhering process.

Claim 22 (new) : The method of claim 19, wherein the step of applying a force comprises the step of applying a bending force, in which position the first film is bent and adhered to a surface of the second film.

Claim 23 (new) : The method of claim 19, wherein said additional film is arranged to be adhered to one of an intended inner or outer side of the curvature of the curved flat panel display device.

Claim 24 (new) : The method of claim 19, wherein said adhering of the additional film to the display film is done by means of laminating.
